

Oto-Mangean

Terrence Kaufman

Kaufman's contribution to the proposed volume will present the regular sound correspondences within and across OM families, and the reconstructed pOM phonological system. The full paper "New perspectives..." that this discussion will be based on will be posted on line at the webpage of the PDLMA at IMS UAlbany. Approximately 450 pOM reconstructions will be presented, but the supporting forms will not be presented due to space constraints. The reconstructed set of TAMVN markers will be presented, but not all the data the reconstruction is based on. The original paper "OMTAMVN" will be posted on line at the webpage of the PDLMA at IMS UAlbany. Arguments will be offered regarding the correct subgrouping of the 8 constituent families. The history of cpv OM studies will not be dealt with in detail.
